

# MEASURING FOR THE CORRECT EZ SHOWERBASE

## EZ3264E STANDARD

### BATHTUB REPLACEMENT

1. This base can be used for a left or right drain
2. Determine the shower area drain center and record the dimensions
3. The standard bathtub replacement size allows a left/right of center measurement from 7.5" to 11.5".
4. In this example, we have a 28 X 60 shower floor size.
5. To achieve this size, trim 3" off the left side and 1" of the right side for a 60" width.
6. Trim 2" off both the top and bottom for a 28" depth.

See Installation Page for  
Trimming Instructions
